

# README

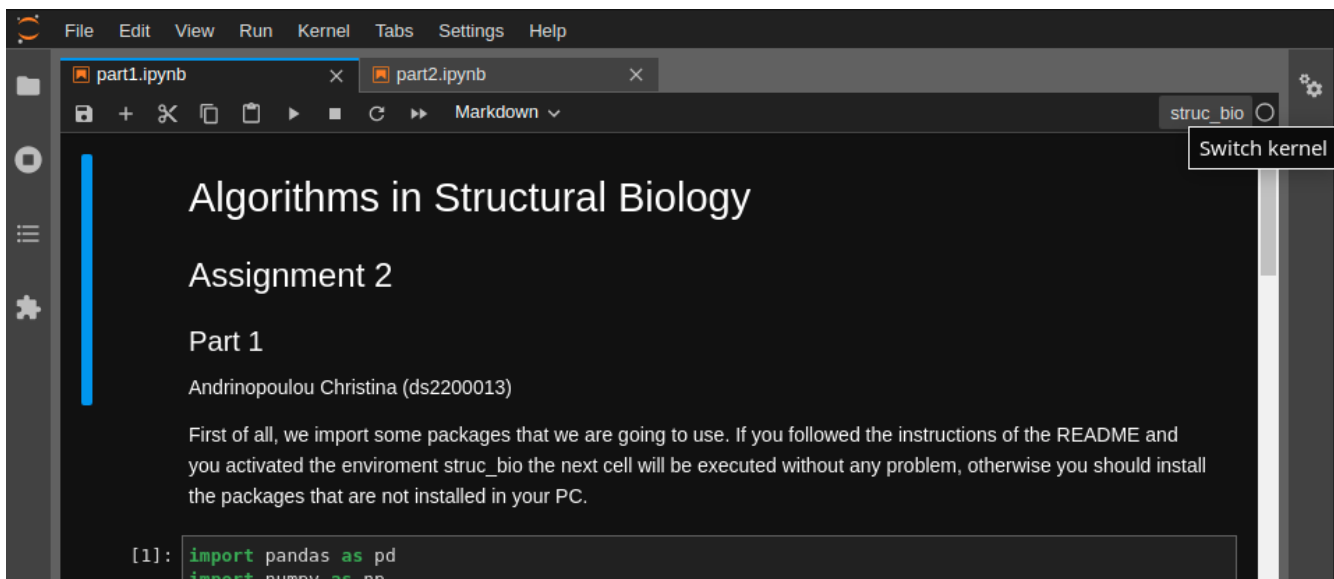

It is highly recommended to follow the instructions below for the execution of the two jupyter notebooks. You should have Anaconda installed in you PC so as to follow the steps below. Otherwise, we can avoid the instructions below, but you have to install every package (that is used in the notebooks) that you do not have in your PC.

For the execution of the two python notebooks, please follow the instructions below:

1. Move into the directory, which contains the code.
2. Execute the commands below:

```
$ conda env create -f environment.yml  
$ conda activate struc_bio  
$ jupyter lab
```

3. Wait until the jupyter lab is ready.
4. If the kernel is not set to be the kernel “struc\_bio”, change the kernel.

5. Run the notebook.
